

MY BEST PROJECT(OXYGEN02)

1. Requirements:

My requirement to build this project is to supply oxygen cylinders during pandemic times. As we all saw people are dying of not having sufficient oxygen, and spending a lot of money to buy oxygen. The main of these projects is to supply oxygen cylinders to the people by collecting donations from the oxygeno2 website.

2. TOOLS:

The software tools used to build these project is scripting language Html, CSS, and javascript. I also used Razorpay integration for getting donations from the website. I also used a JSON file to get the live location, which tells about the covid patients' location countries.

3. BASIC STRUCTURE:

The basic structure of my project is to build a live website that helps many people during pandemic times and also spread humanity among people.
